nololordos accepted your request to extend the delivery time Oct 3, 2025, 12:12 PM

Me
I'm working on your issues, And I think I need some more time to complete everything. As the timeline is near the end, I'm sending you a 7 days time extension request so I can comfortably work on your feedback.

Please accept it. Thanks.

You sent a message Oct 3, 2025, 5:39 PM

Hi nololordos,

I wanted to inform you that I have successfully resolved the reset button, fixed the launching issue, and created a new history screen for easier navigation and review.

Additionally, I have refactored the export option to improve its functionality and performance.

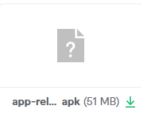

Could you please clarify which data you would like to import? The number of buttons on the interface will increase based on the types of data you choose to import.

For example, if you want to import players, we will need to add a button specifically for importing players, similar to the existing import button for matches.

Please let me know your preferences so I can proceed accordingly.

Best regards,

About the data what i do want is"Save All Data" button that saves all content (players, matches, stats, history) everything into one file.When i press Save all Data i should select the folder i want to save this file.

- Then, add a "Load All Data" option that allows me to select that file and restore everything -- even on a different device running the same app.

Example i use Samsung Galaxy s25 team Aek played 10 matches then i press save all data button and i save to file in my devide for example in sd folderThen i copy this file to another device Xiaomi Poco and i press load data file from the app.The app loads the data file and restore everyrhing player names ,stats history everything as it was at Galaxy S25 with 10 matches.

1And i also want an export log file button of the app .This button will export log file thank u

G You sent a message *Oct 5, 2025, 6:21 PM*

Hello nolordos,

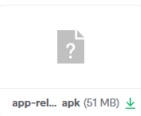

I wanted to let you know that I have resolved all the reported issues, including the srTopTen image problem, the history screen icon issue, and the history screen calendar issue.

However, I am still unclear about the import data functionality. It is not feasible to import all data using a single button. Could you please specify which types of data you want to be imported? Based on that, we can set up one or multiple buttons accordingly to handle each data type import.

Please provide your preferences so I can proceed accordingly.

Thank you!

Yesterday

N nolordos sent you a message *Oct 6, 2025, 3:34 AM*

Hello about the import data functionality.What i actually want is to save all the user data to a file.It is like a game when you want to save or load a game.So lets use from now the words load and save.So when i press save all data the app selects the folder i want to save my data file(The data file includes all teams,all players names rosters , all stats , all history everything).When i press load data i choose the folder to load my data file.

We need this because if user change his phone HE MUST NOT LOOSE DATA .So he can load the data from the old phone by copying this save file and load it from the SKOUTRATE app.I send u an image to help u.Thank u.
